higher. It is now winning more contracts to deliver its vaccine and analysts are taking note. Source: Ascannio / Shutterstock.com And the stock is climbing. Especially since the FDA approved its Covid-19 vaccine on December 18 for Use. For example, MRNA stock has increased by more than 82% in the last six months. And in the past two months, the stock has climbed more than 60% to about \$111. Profit forecasts and valuation In addition, the profit forecasts are profit forecasts 2021 and 2022 put MRNA shares at a reasonable valuation, despite the recent increase. Analysts surveyed by Seeking Alpha now show that earnings per share (EPS) will rise \$9.46 by 2021. This is up from a loss of \$1.69 in 2020.InvestorPlace - Stock Market News, Stock Advice & Trading Tips In addition, I estimate an EPS of \$9.92, or nearly \$10 per share, for 2022. That means MRNA shares will be trading for 11.4 times EPS in 2022. This is seen by splitting \$114.39 by \$10 EPS. That's a very reasonable rating. Classification 10 of 2020's Hottest SCs in preparation for the new year However, I think this could be low-balling its potential revenue power. Every day it seems the company is picking up new contracts for its Covid-19 vaccine and related products. For example, the company just signed the U.S. Army to an additional \$1.97 billion contract for 100 million doses. That comes out at about \$20 per dose. This is in addition to up to 770 million doses that Moderna said it had confirmed as of December 18. I think it's possible its earnings power will be at least \$12 per share in the next few years. This is 20% higher than analysts currently conservatively estimate. Moreover, MRNA shares with 15 times profit, a more suitable valuation for a company with such profit strength, will be worth much more. For example, 15 times \$12 EPS delivers a price target of \$180 per share. This is a potential gain of more than 57% from the current price of \$114.39 on December 29. Moderna's long-term value moreover, in the long run, it is not out of the question that Moderna could sell 1 billion doses a year. At \$20 per dose, that implies that revenue would be \$20 billion a year. This price is significantly lower than a rumored \$50 to \$60 per dose price level. That's what The Financial Times and Reuters reported in July. In other words, my revenue estimate is very conservative. Right now, the stock trades for 6 times 2021 revenue, based on its Seeking Alpha revenue forecasts. Therefore, at 6 times \$20 billion in revenue MRNA needs a market capitalization of \$120 billion. This is a gain of 172% above the current \$44.08 billion market capitalization, that is, 2.72 times the price today. In other words, MRNA stock can be worth \$311.14 in the long run based on 1 billion doses per year at \$20 per dose. This is found by multiplying 2.72 times the current price of \$114.39. And don't forget that we're conservative in our revenue estimate. Therefore, we can say based on short-term profit power, MRNA stock is worth 57% more at \$180. And based on long-term earnings ability, the stock is worth 172% more at \$311.14. What to do with MRNA Stock Not just my word that MRNA stock is For example, Tipranks reports that 16 analysts believe the average price target for the stock should be \$148.31. This means a potential profit of more than 30% above the current price. In addition, Yahoo! Finance reports that 15 analysts have a one price target of \$140.80 for MRNA shares. That's a potential gain of 23% over the current price. So, whether you're looking at MRNA from a short-term, long-term, or analysts consensus view, the target price is still significantly higher than today. It's going to happen this, investors in MRNA stocks have a good chance to make money. On the date of publication, Mark R. Hake had no (direct or indirect) positions in any of the securities mentioned in this article. Mark Hake runs the Total Yield Value Guide which you view here. More from InvestorPlace Why everyone invests in 5G All WRONG Top Stock Picker reveals its next 1,000% Winner Radical New Battery could dismantle oil markets The post Moderna Stock Is Worth Much More first appeared on InvestorPlace.Discover how a backdoor Roth IRA works, how to set one up, the rules to follow and when a backdoor IRA might not be right for you. Investor's Business DailyVinding top semiconductor stocks buy involves understanding the health of markets that buy chips for their products. Chip stocks rose in 2020 as the industry came out of a downturn. The looming Georgia runoff election next Tuesday could inject volatility into a high-flying stock market that has mostly looked past politics in favor of the better economic outlook next year. Data-mining software company Palantir Technologies (NYSE: PLTR) stock began trading on the Big Board on September 30 after a direct initial public offering (DPO). No new shares of Palantir shares were offered in this direct listing. Instead, existing shareholders were allowed to sell their shares to new investors. Source: Various Photography/Shutterstock.com The New York Stock Exchange initially set a reference price of \$7.25 per share, but on the first trading day, Palantir stock opened at \$10 and closed at \$9.50. On November 27, Palantir stock saw a record \$33.50 and are now flirting with \$25.InvestorPlace – Stock Market News, Stock Advice & Trading Tips Denver-based Palantir was founded in 2003 by a group of executives led by Peter Thiel, founder of PayPal (NASDAQ: PYPL). He was also one of the early backers of Facebook (NASDAQ: FB). Palantir's first works, especially with government agencies such as the Central Intelligence Agency (CIA), have been considered controversial and even secretive. In assessing 10 of 2020's Hottest SPC's in preparation for the new year today looks at what investors can expect from the company. Although PLTR is relatively overvalued, those investors with a long-term horizon may consider any dip toward \$22.5 or even below as an opportunity to enter long PLTR stock. Here's why. Government Contracts and Palantir Stock Since 2003, Palantir has other governments as private companies. For example, palantir and Japan-based insurer Sampo (OTCMKTS:SMPNY) formed a joint venture together in November 2019. In June 2020, they launched the Real Data Platform for Security, Health and Recent academic research by Roxana Akhmetova of the University of Oxford, claims that the partnership is problematic because Thiel is a Trump adviser. In September, Palantir was awarded a \$44.4 million, three-year contract by the U.S. Food and Drug Administration (FDA). It will provide data management and analytics services to the FDA's Center for Drug Evaluation and Research (CDER), which focuses on potential new drugs. At the beginning of December, Palantir announced cooperation with the Greek government. The country is working to improve its COVID-19 response efforts by integrating more data and analytics into the decision-making process. Palantir recently developed a tool for the U.S. government to monitor the production of coronavirus vaccines and their distribution. The UK National Health Service has also worked with Palantir. Over the summer, CNBC reported, that Britain's NHS gave Palantir access to millions of UK residents' private personal data. Palantir recently signed a two-year contract with the NHS. It will now provide the organization with a software platform for data processing. In fact, a recent company press release highlights, Palantir is supporting a wide range of settings as they respond to the COVID-19 pandemic and adapt for the future. How Palantir's recent earnings came in mid-November, Palantir released Q3 results. Revenue was \$289.4 million, an annual increase of 52%. Net loss of \$853.3 million translated into diluted net loss per share of 94 cents. With a waiver of 30 September, the total number of cash was USD 1.8 billion. Management raised its full-year 2020 revenue forecast to a range of \$1.070 billion to \$1.072 billion, an annualized 44%. The company highlighted its international expansion in its quarterly results. Co-founder and CEO Alexander C. Karp quoted: Sampo's work is vital to Japan's well-being and security, and Kengo Sakurada, the company's group chief, has been a critical and trusted partner as we work with Sampo to expand our reach in Asia. Palantir stock's forward P/E, P/S, and P/B ratios are 208.33, 42.58 and 37.0, respectively. PLTR stock is frothy even for growth stocks that is able to get a large number of government contracts. Given the statistics, it is currently one of the most expensive software stocks on the street. For example, the gaping P/E and P/B ratios for the SPDR S&P Software & Services ETF (NYSEARCA:XSW) are 30.62 and 6.63. The Bottom Line Palantir is a growth stock and is likely to create shareholder value for years to now. However, it is richly appreciated and expensive. Therefore long-term investors may consider buying the dips, especially if the price drops toward \$ Are you currently a shareholder? You are thinking of initiating a covered call position in PLTR stock. Then maybe you can protect some of your paper profits. For example, an ATM-backed call that expires on January 15 would reduce portfolio volatility and provide some downward protection. Protection. could also be considered by an exchange-traded fund (ETF) that also holds Palantir shares in its portfolio. Examples include the Renaissance IPO ETF (NYSEARCA: IPO), the First Trust U.S. Equity Opportunities ETF (NYSEARCA:FPX), the Vanguard Mid-Cap ETF (NYSEARCA:VO), the ARK Next Generation Internet ETF (NYSEARCA:ARKW), or the BNY Mellon US Small Cap Core Equity ETF (NYSEARCA:BKSE). More From InvestorPlace Why Everyone Is Investing in 5G All WRONG Top Stock Picker Unveils its next 1,000% Winner Radical New Battery Could dismantle The Oil Markets The post Palantir Stock Goes Ground give before it moves Clearly higher first appeared on InvestorPlace.If someone could bet a large sum of money by the end of 2019 that the new coronavirus would change global conditions so drastically, the return would have been astronomical. And while there are ways to bet on unusual things with few chances to take advantage, the gambling stocks below offer high odds of performing well in 2021. A ReportLinker report on the global gambling industry predicts growth: Global gambling market to reach \$647.9 billion by 2027, even accounting for the pandemic. Lotteries are expected to have a 9.9% compound annual growth rate and a total of \$209.9 billion by 2027. Cagr of the casino segment, citing the pandemic, was revised up to 2%. The go-cords that follow attract thousands of visitors every year. Travel is expected to rebound - entertainment as well. And, the stakes are high that adding quality gambling stocks to your portfolio could mean a nice bull run in 2021.InvestorPlace – Stock Market News, Stock Advice & Trading Tips Classification 10 of 2020's Hottest SPC's in preparation for the new year with economic recovery and an increase in consumer spending, these exchange-traded funds and companies could perform well next year: Roundhill Sports Betting & iGaming ETF (NYSEARCA:BETZ) VanEck Vectors Gaming ETF (NASDAQ:BJK) MGM Resorts International (NYSE:MGM) Las Vegas Sands (NYSE:LVS) Gambling Stocks: Roundhill Sports Betting & iGaming ETF (BETZ) Source: rawf8/Shutterstock.com This sports betting ETF includes gambling shares focused on the sports betting & iGaming industries. But the good news is that it is a global opinion and not just of the U.S. At the end of December 2020, the assets under management were \$204 million and the cost ratio was 0.75%. This ratio is not considered too high, nor too This is a balanced ETF with 38 holdings, including Penn National Gaming (NASDAQ:PENN) and DraftKings (NASDAQ:DKNG). While the U.S. is the largest country with net asset exposure, this fund offers a lot of diversification with the rest assets focused on Europe and Asia. There is a preference for mid-cap stocks, which represent 51.4% of net assets. Assets are balanced on a quarterly basis. Net asset value has increased by 39% since its inception in June 2020. VanEck Vectors Gaming ETF (BJK) Source: Shutterstock According to the fund's description, this gambling ETF strives to replicate as closely as possible, before fees and fees, price and revenue performance of the MVIS Global Gaming Index, which is intended to track the overall performance of companies involved in casinos and casino hotels, sports betting, lottery services, gaming services, gaming technology, and gaming equipment. At the end of December 2020, total net assets were \$75.7 million and the net cost ratio was 0.66%. This ETF can add diversification in gambling shares with 42 holdings. The U.S. is the country with the largest weighting at 46.92%. Other countries represented are Australia and China. With a year-to-date net asset performance of 11.59%, overall performance is considered attractive. Buy 10 of 2020's Hottest SCs in preparation for the new year Both ETFs offer the benefit of investing in gambling stocks without focusing directly on inventory analysis, suitable for passive investing. For investors with a more active investment style, the following gambling stocks will offer attractive risk reward potential in 2021. Gambling stocks: MGM Resorts International (MGM) Source: Michael Neil Thomas/Shutterstock.com MGM Resorts International has casino resorts in the United States and Macau with a variety of gaming, hotel and entertainment amenities. It was cited in another InvestorPlace article: 3 Hotel shares posed the biggest threats to Airbnb. Looking at the year-to-date performance of -5.95% seems to be an underperforming stock. But the stock has rallied impressively of about +44% in the past three months. It also seems cheap, with a P/E Ratio (TTM) of 10.62. There are two positive factors that can drive growth for MGM shares. MGM became the sports betting partner of the Philadelphia 76ers NBA team. Also, sports betting is likely to be a key growth driver for the industry in several states. The company rebound seems to be in a full swing. The net margin of the share was 15.86% in 2019 and 21.47% in 2020, for the 12-month backlog, amid the pandemic. Las Vegas Sands (LVS) Source: Andy Borysowski/Shutterstock.com Las Vegas Sands operates resorts in Asia and the United States with gaming and entertainment facilities. The pandemic has performance in 2020. Revenue, operating profit and profitability declined and the company saw losses. From a valuation perspective, the stock now seems expensive, expensive, this is due to the abnormal economy. In order to buy 10 of the hottest SPC's of 2020 in preparation for the new year, I am optimistic that by 2021 the LVS stock – almost 15% by 2020 – can recover and perform well. Why? If we consider the year 2020 to be an outlier for the performance of the share, the trend in other years has been consistent. This applies to profitability, revenue growth and even dividend yield. All were remarkable. And these consistent financial performance may well return if the odds are quite high. On the date of publication, Stavros Georgiadis, CFA, had no (direct or indirect) positions in the securities listed in this article. More from InvestorPlace Why Everyone Invests in 5G All Wrong Top Stock Picker Reveals Its Next 1,000% Winner Radical New Battery Could Dismantle Oil Markets The Post 4 Gambling Stocks Set for a Bull Run in 2021 first appeared on InvestorPlace.Chinese electric vehicle maker XPeng is upping its self-driving game, announcing its first partnership with a Lidar sensor company on Friday. The bond market is a barren field for earnings, as fixed income yields remain stuck at historic lows. With rates just barely above all-time lows, yield opportunities are clustered in stock markets, says David King, co-manager of the Columbia Flexible Capital Income fund. King says income-hungry investors should look no further than the so-called Dogs of the Dow, the 10 highest yielding stocks in the 30-stock Dow Jones Industrial Average.Everyone likes a good bargain, right? When the market weathered that painful selloff in March, it drove down stock valuations. At the time, though, volatility was so high and there were so many unknowns that it was hard to pile into names. So, are there any cheap stocks to buy now? The short answer? Yes. That brutal drop in the second quarter made for a lot of cheap names. But in many cases it is difficult to say what is cheap and what a trap is. That's because we didn't know how companies would react to the new environment. As we near the end of 2020, though - with all the major US stock indices in new highs - it's pretty clear that the market is doing just fine. And there are still some cheap stocks out there, waiting to pick up a bid from buyers. InvestorPlace – Stock Market News, Stock Advice & Trading Tips Sort 10 of 2020's Hottest SPC's in preparation for the New Year I recently looked at some cheap picks that have become not-so-cheap in the past month or so. Let's see if we can find some other bargains now. Alibaba (NYSE:BABA) Qualcomm (NASDAQ:QCOM) AT&T (NYSE:T) Gogo (NASDAQ:GOGO) Walgreens (NASDAQ:WBA) Ally Financial (NYSE:ALLY) Bristol-Myers Squibb (NYSE:BMJ) Cheap Stock to Buy: Alibaba Source: testing/Shutterstock.com When someone clicks on an article about stocks bargain to buy, they probably don't think they'll see a high-growth tech company with a market capitalization of more than \$648 billion. But that's what we have with Alibaba. Why is BABA BABA on this list? Well, if I'm looking for cheap stocks, I'm not alone after names with low price-earnings ratios. I am also looking for stocks with unique fundamentals or that are cheap relative to the growth rate of the company. That's exactly what we have with Alibaba. From the peak to the recent trough, shares tumbled nearly 34%. Now, the price is over \$234. But I have a rule of thumb called the 40% rule – when a high-quality company falls 40%, it's worth a proper investigation. Although Alibaba hasn't fallen that far yet, it's worth a look. Shares are down on regulatory concerns for both itself and Ant Group, the latter of which has a third stake in it. However, I see the tech firm's current regulatory headache as nothing more than bending the Chinese government. This too will pass and the focus will eventually shift to the fundamentals of the company. So, given its sheer dominance in China's e-commerce space, its stellar assets, infrastructure and growth, Alibaba is damn cheap. While at 16.7 times forward price-earnings, consensus estimates call for 37% earnings growth this year and nearly 21% next year. To advance sales, estimates call for 48% growth this year and 30.5% next year. Qualcomm (QCOM) Source: Akshdeep Kaur Raked/Shutterstock.com Next on my list of cheap stocks is Qualcomm. Thanks to a massive catalyst with 5G technology, Qualcomm will achieve high-quality growth in the near future. Plus, the deal with Apple (NASDAQ: AAPL) ensures that it will have reliable customers on the other side of the transaction. Despite this, though, the stock is wobbly near the new highs. Shares fell 9% in a three-day period in mid-December. Currently, the stock remains 5.7% below this month's high, giving investors the chance to buy. The company also recently began fiscal year 2021, where consensus estimates demand 40% revenue growth. For this, investors currently pay only about 21 times more price gains. The 7 safest stocks to start 2021 on the right foot, in addition, next year's estimates call for a slowdown in growth, but they still call for growth in general. Throw in the 1.73% dividend yield - nearly double the 10-year Treasury yield - and Qualcomm looks attractive. AT&T Source: Jonathan Weiss/Shutterstock AT&T is almost always on the lists of cheap stocks to buy now. But with such a huge dividend yield and a low valuation, how can that not be? Currently, the name pays out a return of 7.3% – a huge return versus fixed income and most other dividends. In addition, the stock trades at only 9 times this year's earnings estimates. With that said, though, there are some red flags. Firstly, the T share has fallen considerably this year, 27.3% in 2020, while the S&P 500 will increase by 15.5%. Secondly, the company is now five quarters without increasing its dividend. And finally, it has a ton of debt weighing about \$170 billion. Let's deal with it now. The stock is approximately emitted and flowed the mid-\$20 to mid-\$30 for the last five years. In that period, buying less than \$30 has generally rewarded shareholders and - without Hitting Covid-19 - the stock was setting up for a move of more than \$37 and perhaps into the \$40s. Of course, the choice not to increase the dividend earlier this month is surprising given that AT&T is a Dividend Aristocrat. That said, AT&T had only been increasing its quarterly payout by a penny per share for the last few years. So, increasing the dividend was more an attempt to keep the streak alive than anything else. Plus, at 7.3%, do we really need more returns if that extra cash flow could reduce debt? Speaking of debt, AT&T continues to refinance at ultra-low interest rates and wants to divest assets outside its core strategy. TimeWarner's acquisition of the company was expensive, but it is a free-cash-flow machine. That will support lowering the debt and maintaining its lofty payout at a reasonable level. Finally, the HBO Max unit is now available through Roku (NASDAQ: ROKU) and should gain significant traction soon. Gogo (GOGO) Source: EQRoy/Shutterstock.com Earlier in this article, I mentioned that special cases sometimes have a uniquely fundamental situation that can affect what I consider to be one of the cheap stocks. I think that's what we have with Gogo. Too often, investors are willing to overlook situations like this – they gloss over the price-earnings ratio and perhaps take a look at some revenue growth estimates. In the case of Gogo, shares could have a very strong 2021, should the catalysts continue to take off. The company essentially has two business units: commercial aviation (CA) and business aviation (BA). Recently, though, it announced the sale of its CA unit, which made a negative contribution to the bottom line and cash flow. But the risk for Gogo was that the deal would not close come early Q1. The company announced earlier this month that the deal has indeed been closed. At the height, shares jumped 13.4% in a single day on the news, but it has since given up those gains. It's trading just under \$10 now. Getting rid of the CA unit for nothing would have been beneficial for Gogo, given the drag on the financials. Getting \$400 million in cash is vastly better, however. That will give the company some flexibility as it cleanses its balance sheet and uses the profitable BA unit moving forward. 9 Long-term stocks for the next decade So, is this a takeaway? Maybe. But even if it doesn't, GOGO stock is cheap and worth a look. Walgreens (WBA) Source: saaton/Shutterstock.com Back to cheap stocks with conditions that are a little less unique, though, Walgreens could present some nice value for investors. In WBA stock has been stuck in the mud for years, bobbling along while the rest of the market chugs higher. That's not a great sales pitch, but it seems like the value is getting too hard to ignore. Shares bottomed out near \$33 in late October just after earnings, before taking off and clearing \$44 a month later. Then the news of Amazon's (NASDAQ: AMZN) pharmacy plans hit the wires and both Walgreens and CVS (NYSE: CVS) cratered. That's typical Amazon is taking on the world price action. When it comes down to it, though, Amazon rarely swoops in and takes all the market share. So, I don't expect WBA's demise to happen as a result. That said, the company is prepared for modest top- and bottom-line growth both this year and next. Shares trade at a paltry 8.1 times earnings and pay a dividend yield of 4.75%. That leaves some meat on the bone for investors. Ally Financial (ALLY) Source: Shutterstock This year, energy is the worst performing sector out there with a long time. Although the financial sector is doing much better, it is the second worst performing group. However, there seems to be some value in many of the individual companies. Ally Financial is one of the propositions - and it's really unique. This is due to both valuation and equity performance. Shares were hit hard in February, down about 25% by the end of the month. Then, despite rallying 51% from its lows in March, ALLY stock still ended that month significantly down from pre-pandemic prices. That speaks to the volatility it has seen this year. Since then, however, Ally has rallied nine months in a row. That's rare price action, even for the best performing stocks this year. The company has smashed its profit estimates for the last two quarters and is still days away from the last quarter of fiscal 2020. Then the 2021 financial year begins, where analysts are calling for 10% revenue growth and even better profits. 7 Undervalued stocks that could rise in 2021 So, even if it's at new highs, ALLY seems to be buying one of the cheap stocks, trading at nearly 9.2 times forward earnings. On top of that, the stock trades at less than once book value. As such, savvy investors should take a look at this name on a dip. Bristol-Myers Squibb (BMY) Source: Piotr Swat/Shutterstock.com Last but not least on my list of cheap shares is Bristol-Myers Squibb. BMY stock does not retain the credit that I think it deserves. The current company is the result of the mega-acquisition of Celgene, which Bristol-Myers acquired for \$74 billion at the end of 2019. This was a huge deal that generated great long-term value. Celgene had a low rating, but it wasn't very good to run, driving that rating even lower. That low valuation is also present in Bristol-Myers, as Wall Street forces the stock into evidence mode. Well, this company is here to do that. Like many other names on this list, Bristol-Myers trades at less than 10 times forward price-earnings. Because it involves adding celgene's results, comparing the current annual estimates with the year doesn't do much good. Instead, we look at future estimates. While estimates are sensitive to inaccuracies, analysts expect revenue growth of 9% in fiscal year 2021 and 17% 17% Growth. And given that the company has beaten on profit estimates consistently, perhaps even these figures are conservative. It also helps that the stock pays a dividend yield of 3.2%. So, will Wall Street reward Bristol-Myers with a higher rating? Who knows. But if it meets expectations, the company must bring great value to shareholders. At the date of publication, Bret Kenwell held a long position in T, GOGO, AAPL and BMY. Bret Kenwell is the manager and author of Future Blue Chips and has @BretKenwell on Twitter.
